LATEST NEWS ON COLINES® TECHNOLOGICAL DEVELOPMENTS

EDITORIAL

The Handrollex® exhibited at the K'07 with a web width of 1000 mm, worked for the whole duration of the event with a production achieving even net levels above 600 kg/h and speeds of 500 m/min. With extremely quick change cycles (the minimum cycle is 16 sec, as known) every four hours we produced 1500 2" small reels of stretch film with very good optical and mechanical quality.
